

30th July, 2015

The Principal,

Roemichs International Schools,

Ilorin, Kwara State.

Dear Sir,

PROPOSAL TO PROVIDE A CUSTOMIZABLE COMPUTER-BASED TESTING SYSTEM TO FACILITATE STUDENTS' PERFORMANCE IN BOTH INTERNAL AND PUBLIC EXAMINATIONS

Situation

Over the last few years, there has been a migration from the usual manual system of writing tests and examinations, especially public and private examinations, to automated computer-based systems. These examinations include: University Tertiary Matriculation Examination (UTME) - the examination body that helps facilitate the admission of students into higher institutions of learning, Post UTME and even job interview tests usually organized by SHL and Cubik.

No doubts, this CBT System has been adopted to curb the effects of examination malpractice on our nation's academic framework and to synchronize the frequency of our education with that of the advanced nations of the world.

Since the introduction of the CBT System, research has indicated that over 50% of candidates who write the UTME fail abysmally. This has shown that the number of failures has escalated beyond the usual index recorded during the periods of using the manual systems. Of course, this could be attributed to lack of technical know-how on the side of the students as regards answering questions running on a computer system via a centralized data management server. The difficulties of interacting with the computer system when writing examinations ultimately result from computer illiteracy.

Proposed Solution

An application branded; CBS Pro X1, is an initiative that has been specially and uniquely crafted out by Zwits Technologies Limited based on the prevailing challenges being faced by our educational system. The main motivation behind this ideology is that of curbing the

impact of the receding academic standard including increase in the number of years spent by students in seeking for admission and unemployment in the long run due to the late-age-of-graduation syndrome.

Core features of the System

The CBS Pro X1 application has the following that makes it stand out in the midst of similar existing systems in the market:

- It incorporates a system whereby the administration can have a unique password and students or candidates can be registered using their names, surnames, passwords, exam I.D, their passports and examination combination or exam set.
- The website of all universities in Nigeria including private and public universities can be visited to check out for information concerning admission status and other related information.
- Information concerning undergraduate scholarships for Nigerian students can easily be accessed.
- Video help tutorial rendering a visual demonstration of how the software can be put to use.
- Printable results for each candidate after attempting the test or examination which will help monitor the performance of candidates.
- Preferred examination questions can be updated by the instructor.

Our Firm

Zwits Technologies Limited was founded by a group and dynamic Nigerians who are well experienced in Software Engineering and have excelled in their field of study.

Our ranges of services include; Desktop Application Development (DAD), Mobile Application Development (M.A.D), Website Design and development services and Networking Consultancy Services.

Our main source of motivation is the provision of effective services to our clients and customers.

Conclusion

It is our expectation that you avail us the opportunity to provide the aforementioned product to you in your esteemed organization. We re-iterate our dedication towards the provision of an interactive educational system for your students.

We thank you in anticipation of your positive response.

Yours Faithfully

Olebu Chinedu G.

PASSAGE I: A lesser degree the sun, does cause the ocean tides because of their gravitational pull. But a common mistake of primitive people is to think that everything timed in the same rhythm as the moon is caused by it. All the moon gazing, probing and measuring has never solved the big problem: its origin. One theory is that it began as a planet, got too near the more massive earth, was 'captured' and turned into a satellite. Another is that the latter theory is true, scientists say, there would be two clues: the moon would consist of lighter material than the earth, and the earth would be left with a scar. As a matter of fact, the moon does weigh less. And the Pacific Ocean does have a scarlike bottom of basaltic rocks instead of the granite rocks usually found near the earth's surface. But the assumption that, if man can get to the moon, he'll
