8th July, 2015

The Principal,

Bosworth College International,

Bode Onifade Avenue,

Mafoluku, Oshodi ,

Lagos State.

Dear Sir,

**PROPOSAL TO PROVIDE A CUSTOMIZABLE COMPUTER-BASED TESTING
SYSTEM TO FACILITATE STUDENTS' PERFORMANCE IN BOTH INTERNAL AND
PUBLIC EXAMINATIONS**

Situation

Over the last few years, there has been a migration from the usual manual systems of writing tests and examinations, especially public and private examinations, to automated computer-based systems. These examinations include: the university tertiary matriculation examination (UTME)- the examination body that helps facilitate the admission of students into higher institutions of learning, post UTME exams and even job interview tests usually organized by SHL and Cubik.

No doubts, this CBT system has been adopted to curb the effects of examination malpractice on our nation's academic framework and to synchronize the frequency of our education with that of the advanced nations of the world.

Since the introduction of the CBT system, research has indicated that over 50% of candidates who write the UTME fail abysmally. This has shown that the number of failures has escalated beyond the usual index recorded during the periods of using the manual system. Of course, this could be attributed to lack of technical know-how on the side of the students as regards answering questions running on a computer system via a centralized data management server. The difficulties of interacting with the computer system when writing examinations ultimately result from computer illiteracy.

Proposed Solution

An application, branded; CBT guide prox1, is an initiative that has been specially and uniquely crafted out by the Zwits Technologies Limited based on the prevailing challenges being faced by our education system. The main motivation behind this ideology is that of curbing the impact of the receding academic standard including increase in the number of years spent by students in seeking for admission and unemployment in the long run due to the late-age-of-graduation syndrome.

Core features of the System

The CBT guide application system has the following features that make it stand out in the midst of similar existing systems in the market:

- 1) It incorporates a system whereby the administration can have a unique password and students or candidates can be registered using their names, surname, password, exam id, their passports and examination combination or exam set.
- 2) The website of all universities in Nigeria including private and public universities can be visited to check out for information concerning admission status and other related information.
- 3) Information concerning undergraduate scholarships for Nigerian students can easily be accessed.
- 4) Video help tutorial rendering a visual demonstration of how the software can be put to use.

- 5) Printable results for each candidate after attempting the test or examination which will help monitor the performances of candidates.
- 6) Preferred examination questions for each subject can be updated by the instructor.

Our Firm

The Zwits Technologies Limited was founded by a group of young and dynamic Nigerians who have excelled in their courses of study in the higher institution and currently involved in active service to the nation.

Our ranges of services include; desktop application development, mobile application development, website design and development services and networking consultancy services.

Our main source of motivation is the provision of effective services to our clients and customers.

Conclusion

It is our prayer that you avail us the opportunity to provide the aforementioned product to you in your esteemed station. We re-iterate our dedication towards the provision of an interactive educational system for your students. Should you require any information, do not hesitate to contact the undersigned on 07061251479.

We thank you in anticipation of your positive response.

Olebu Chinedu God'swill,

Logistics and Systems,

The Zwits Technologies Limited.
